Title- STUDENT MANAGEMENT SYSTEM

Description-

The Student Management System is a web-based application developed using PHP and MySQL that allows users to store, manage, and retrieve student data efficiently.

The system provides a simple interface to:

- Add student details
- Store records in a database
- Display records in a structured table

This project demonstrates how frontend, backend, and database interact to perform basic data operations in real time.

Code-

CONFIG.PHP

```php
<?php
$host = "127.0.0.1";
$user = "root";
$pass = "Soham@1234";
$db   = "college_db";

$conn = new mysqli($host, $user, $pass, $db);

if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
?>
```

DISPLAY.PHP

```php
<?php
include 'config.php';
$result = $conn->query("SELECT * FROM students");
?>

<!DOCTYPE html>
